SUMMARY

Full Stack Engineer with 6+ years building web and mobile products in TypeScript for enterprise platforms used in 5 countries. Most of my work now is LLM engineering: I run the internal API that calls our models and cut cost per analysis by more than half with the same model. I also build agents and Claude Code tooling that speed up discovery, development and code review. On the side I ship and run my own apps, live on the App Store and Google Play. Professional English, working with US and European teams.

SKILLS

AI engineering	LLM APIs, Vertex AI, Amazon Bedrock, prompt caching, OCR pipelines, cost and latency tracing, AI agents, Claude Code, MCP
Full stack	TypeScript, React, Next.js, Node.js, PostgreSQL, Micro Frontends, Design Systems
Infra	Vercel, Firebase, Sentry, Langfuse, CI/CD, Azure DevOps
Mobile and testing	Expo, Flutter, Ionic, Jest, code review, monitoring

EXPERIENCE

Air Liquide · Full Stack Engineer

Aug 2026 - Present

- Own the internal API our products use to call Vertex AI: configuration, cost and latency measurement, and the move to multi-provider.
- Cut the cost of a complex OCR-heavy analysis from ~US$13 to ~US$6 per run with the same model, through prompt work, a better OCR step, reordered calls and explicit caching. Validating Amazon Bedrock with other models, projected at ~US$2.5.

TypeScript, Node.js, React, Vertex AI, Amazon Bedrock, Claude Code

Air Liquide · Frontend Engineer

Oct 2021 - Aug 2026

AI engineering initiatives (2026)

- Compressed ~6 months of discovery for a large initiative into days by using AI to analyze requirements, define scope, build a working prototype and write the documentation; the project was approved in under 2 weeks.
- Initiated an AI agent that triages Sentry issues, reads the affected code and opens pull requests with proposed fixes, so engineers start from a reviewable diff instead of a stack trace.
- Created a prototype-to-feedback pipeline that turns Lovable and Claude prototypes into deployable review builds where business stakeholders comment on specific screens and approve before development starts.
- Led the team’s internal Claude Code plugin: coding standards, in-browser task validation, Azure DevOps access where MCP support is limited, workflow funnels and automated PR reviewers.

Platform and architecture

- Architected and implemented a Micro Frontends platform that lets 20+ products deploy independently, with faster and safer releases.

Gabriel Sandim gabriel@gbstec.dev.br · gbstec.dev.br

GBS Tecnologia da Informação · Side products, built and run solo

2021 - Present

- My own company for side products, run end to end: product design, frontend, backend, infrastructure, billing and support.
- **Obra Nova** (obranova.com.br): SaaS for small and mid-sized construction companies with paid plans, on the web, App Store and Google Play. Projects, finances and P&L per project, plus an AI assistant on WhatsApp with 39 tools that files daily site reports by voice; p95 response time cut from 82 s to 8 s, traced in Langfuse. Next.js, PostgreSQL, Vercel, Sentry, Flutter.
- **Kapi** (kapiapp.com.br): gamified workout app live on Google Play, App Store review pending. Guided workouts, XP, belts and weekly leagues, watch import through Health Connect and in-app subscriptions. Flutter, Next.js, PostgreSQL; first commit to store listing in under a week.
- **Lifedeck** (lifedeck.com.br): task and event manager with WhatsApp reminders and task creation by message.
- **task-funnel** (open source): Claude Code plugin that turns one task into a reviewed draft pull request, with isolated worktrees, the repo's real CI gates and adversarial AI reviewers.
- **Cashdeck** (open source): self-hosted household finance with Open Finance sync, bill capture and an AI chat with tools. TypeScript, Next.js, PostgreSQL, Flutter.

Safira Holding · Full Stack Engineer

Jan 2020 - Oct 2021

- Led development of the company's first customer-facing product, moving it from internal tools to external products.
- Owned the migration of a legacy solar panel leasing system after an acquisition, delivering a working version in ~1 month and preventing 90 days of downtime.
- Designed and built a billing and debt management system (credit card and invoice payments) that ran in production without errors and became one of the company's most impactful solutions.

Node.js, TypeScript, Angular, Ionic, Firebase

EDUCATION

Systems Analysis and Development

Fatec Mogi das Cruzes · 2018 - 2021

CERTIFICATION

Scrum Fundamentals Certified

SCRUMstudy

LANGUAGES

Portuguese, native

English, professional working proficiency

VOLUNTEERING

Computer Science Instructor, Associação Árvore da Vida

Taught computing fundamentals to children and teens (6 to 17) and built interactive lesson plans for digital inclusion.
